

## INTRODUCTION

"POLARIS" more than fifty years of Casappa experience in design and production of hydraulic components, characterized by large investments in research and development in order to propose new and personalized solutions to the market.

Our use of CAD 3D in the development of this generation permit us the 3D modelling and the virtual simulation of the behaviour of the components inserted in the hydraulic circuit. This means that the process will take less time and the quality of the products is better.

Polaris pumps and motors are basically composed of a gear housing in aluminium alloy, two gear wheels supported by sleeve bearings and two end plates, the front and the rear cover, either in aluminium or in cast iron with excellent mechanical characteristics.

Our success is based largely on the quality of our product. This guarantees the consistencies of the efficiencies and low level of noise emission during the life of our products.

### DISPLACEMENTS

From 1,07 cm<sup>3</sup>/rev (0.07 in<sup>3</sup>/rev)

To 91,10 cm<sup>3</sup>/rev (5.56 in<sup>3</sup>/rev)

### PRESSURE

Max. constant operating pressure 260 bar (3770 psi)

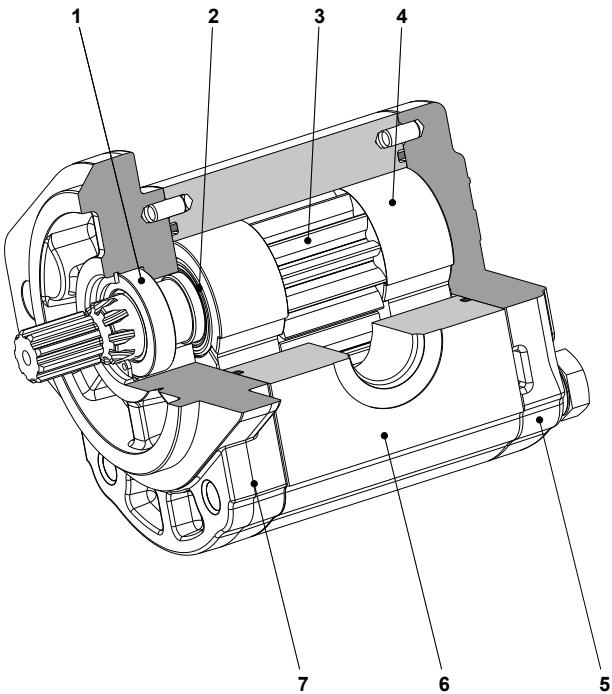

Max. system pressure (relief valve setting) 280 bar (4060 psi)

Max. peak of pressure 300 bar (4350 psi)

### SPEED

Max. 4000 min<sup>-1</sup>

- Available in groups 10, 20 and 30.
- Drive shafts, mounting flanges and ports according to the international standards.
- Combination of multiple pumps in standard version, common inlet and separated stages.
- Integrated outboard bearings for heavy duty application.
- Many types of built-in valves.

### TYPICAL APPLICATIONS

- Building & Construction
- Material Handling
- Agriculture
- Forestry
- Turf care & Mowers
- Fan Drive

## INSTRUCTIONS

### INSTALLATION

#### Pump

The direction of rotation of single-rotation pumps must be the same as that of the drive shaft. Check that the coupling flange correctly aligns the transmission shaft and the pump shaft. Flexible couplings should be used (never rigid fittings) which will not generate an axial or radial load on the pump shaft.

#### Motor

The direction of rotation of single-rotation motors must match circuit connections. Check that the coupling flange correctly aligns the transmission shaft and the motor shaft. Flexible couplings should be used (never rigid fittings) which will not generate an axial or radial load on the motor shaft.

#### TANK

Tank capacity must be sufficient for the system's operating conditions (~ 3 times the amount of oil in circulation) to avoid overheating of the fluid. A heat exchanger should be installed if necessary. The intake and return lines in the tank must be spaced apart (by inserting a vertical divider) to prevent the return-line oil from being taken up again immediately.

#### LINES

The lines must have a major diameter which is at least as large as the diameter of pump or motor ports, and must be perfectly sealed. To reduce loss of power, the lines should be as short as possible, reducing the sources of hydraulic resistance (elbow, throttling, gate valves, etc.) to a minimum. A length of flexible tubing is recommended to reduce the transmission of vibrations. All return lines must end below the minimum oil level, to prevent foaming. Before connecting the lines, remove any plugs and make sure that the lines are perfectly clean.

#### HYDRAULIC FLUID

Use hydraulic fluid conforming to viscosity data as specified in the first pages of the catalogue. Avoid using mixtures of different oils which could result in decomposition and reduction of the oil's lubricating power.

#### FILTERS

We recommend filtering the entire system flow. Filters on suction and return line must be fitted in according to the contamination class as indicated in the first pages of the catalogue. Casappa recommends to use its own production filters:

#### O

### STORAGE

The storage must be in a dry environment. Max storage time in ideal conditions is 24 months. The ideal storage temperature is between 5 °C (41 °F) and 20 °C (68 °F). No problem in case of temperature between -40 °C (-40 °F) and 50 °C (122 °F). Below -40 °C (-40 °F) please consult our pre-sales department.

### STARTING UP

Check that all circuit connections are tight and that the entire system is completely clean. Insert the oil in the tank, using a filter. Bleed the circuit to assist in filling. Set the pressure relief valves to the lowest possible setting. Turn on the system for a few moments at minimum speed, then bleed the circuit again and check the level of oil in the tank.

If the difference between pump or motor temperature and fluid temperature exceeds 10 °C (50 °F), rapidly switch the system on and off to heat it up gradually. Then gradually increase the pressure and speed of rotation until the pre-set operating levels as specified in the catalogue are attained.

### COLD START

Cold start is meant short term and low idle. During cold start of the machine the following limits can be applied:

Minimum inlet pressure	0,5 bar abs. (7 psi)
Outlet pressure (pumps)	≤ 50 bar (725 psi)
Inlet pressure (motors)	
Max drain pressure / Max back pressure for single rotation motors	+ 50% of standard values
Speed	≤ 1500 min <sup>-1</sup>
Minimum temperature	-40 °C (-40 °F)
Max oil viscosity	2000 mm <sup>2</sup> /s (cSt) [9100 SSU]

If the ambient temperature is lower than -20 °C (-4 °F) the system speed and pressure must be limited until the hydraulic oil temperature exceeds -20 °C (-4 °F).

### PERIODICAL CHECKS - MAINTENANCE

Keep the outside surface clean especially in the area of the drive shaft seal. In fact, abrasive powder can accelerate wear on the seal and cause leakage. Replace filters regularly to keep the fluid clean. The oil level must be checked and oil replaced periodically depending on the system's operating conditions.

## FEATURES

Construction	External gear pumps and motors 3-piece construction
Mounting	EUROPEAN - SAE - GERMAN standard flanges
Ports	Threaded or flanged
Direction of rotation (looking on drive shaft)	Anti-clockwise (S) - clockwise (D) - reversible external drain (R - L) reversible internal drain (B)
Inlet pressure range for pumps	0,7 ÷ 3 bar abs. (10 ÷ 44 psi) If p > 1,5 bar abs. (22 psi) specific shaft sealing have to be applied. Please consult our pre-sales department.
Max back pressure for single rotation motors	5 bar (73 psi) continuous @ min. speed 350 min <sup>-1</sup> 1 bar (14.5 psi) continuous @ max. speed (see page 7)
Max drain line pressure on reversible rotation motors	5 bar (73 psi) continuous @ min. speed 350 min <sup>-1</sup> 1 bar (14.5 psi) continuous @ max. speed (see page 7)
Max back pressure on in series motors	150 bar (2175 psi)
Fluid temperature range	See table (1)
Fluid	Mineral oil based hydraulic fluids to ISO/DIN. For other fluids please consult our pre-sales department
Viscosity range	From 12 to 100 mm <sup>2</sup> /s (cSt) [60 to 456 SSU] recommended Up to 750 mm <sup>2</sup> /s (cSt) [3410 SSU] permitted
Filtering requirement and recommended fluid contamination	See table (2) page 6

Tab. 1

Type	Fluid composition	Max pressure bar (psi)	Max speed min <sup>-1</sup>	Temperature - °C (°F)			Seals (●)	Shaft seals option (◆)
				Min	Max continuous	Max peak		
ISO/DIN	Mineral oil based hydraulic fluid to ISO/DIN	See page 7	See page 7	-25 (-13)	80 (176)	100 (212)	N	D  C1
				-25 (-13)	110 (230)	125 (257)	V

(●) N = Buna NBR (standard) - V = Viton-FKM - T-PV = Hydrogenated buna HNBR seals with Viton-FKM shaft seals (only for PLP20)

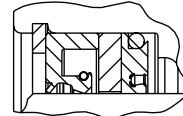

D (◆) shaft seals with wiper seal

C1 (◆) High pressure special shaft seal

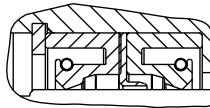

Single rotation pumps  
Max drain line pressure:  
0,5 bar (7 psi)

Max drain line pressure:  
10 bar (145 psi)  
@ 350 min<sup>-1</sup>

Single rotation motors  
Reversible rotation pumps and motors  
Max drain line pressure:  
5 bar (73 psi)  
@ 350 min<sup>-1</sup>

## FEATURES

### Filtration

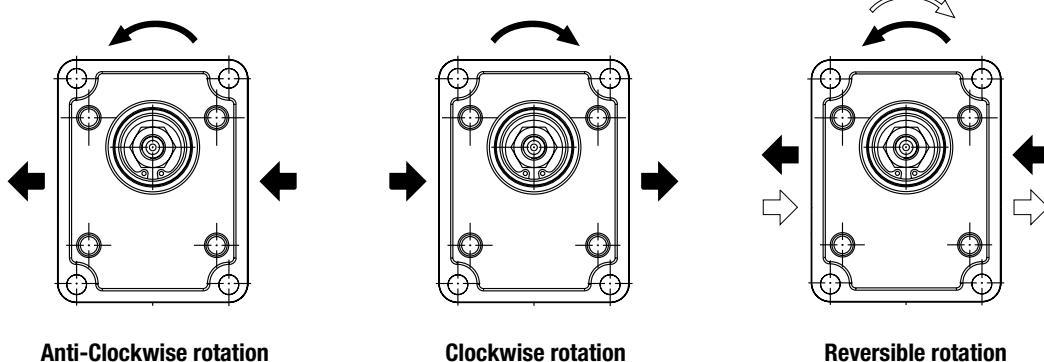

**Tab. 2**

	$\Delta p < 140$ (2030)	$140 < \Delta p < 210$ (2030) (3045)	$\Delta p > 210$ (3045)
Contamination class NAS 1638	10	9	8
Contamination class ISO 4406	21/19/16	20/18/15	19/17/14
Achieved with filter $\beta_{10}$ (c) $\geq 75$ according to ISO 16889	-	10 $\mu\text{m}$	10 $\mu\text{m}$
Achieved with filter $\beta_{25}$ (c) $\geq 200$ according to ISO 16889	25 $\mu\text{m}$	-	-

Casappa recommends to use its own production filters:

### DEFINITION OF ROTATION DIRECTION LOOKING AT THE DRIVE SHAFT

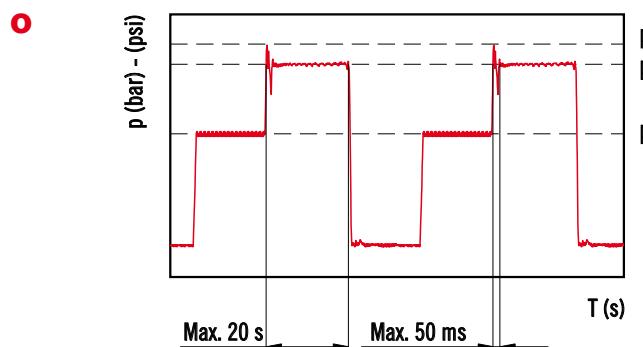

### GENERAL NOTES

Available with different inlet and outlet ports.

For more information please consult our pre-sales department.

### PRESSURE DEFINITION

$p_1$  Constant operating pressure  
 $p_2$  System pressure (relief valve setting)  
 $p_3$  Peak of pressure

The peak of pressure is the max pressure allowed and it corresponds to the overshoot of the relief valve.

Please note that both relief valve setting and overshoot must be lower than their limits.  
If the relief setting is compliant but the overshoot is higher than the limit, the relief setting must be decreased until the overshoot is compliant to Casappa limit.

For high frequency applications please consult our pre-sales department.

(#) = Drain port

(◆) For POLARIS 10

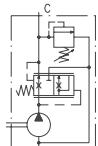

## VALVE OPTIONS

### PRIORITY VALVE

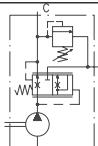

- P1** Constant delivery and internal recirculation of excess flow.

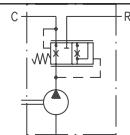

- P2** Constant delivery at controlled pressure. Internal recirculation of excess flow and drain valve.

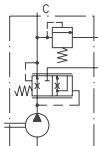

- P3** Constant delivery at controlled pressure. Excess flow and drain valve must be connected to tank.

- P4** Constant delivery and excess flow can both be used under load.

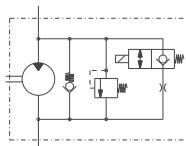

- P5T** Constant delivery at controlled pressure with drain valve connected to tank. Excess flow can be used under load.

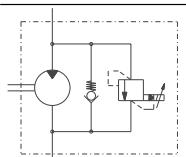

### ELECTRIC VALVE FOR MOTORS

- UNL** By-pass valve normally closed with max. pressure relief valve and anti-cavitation valve.

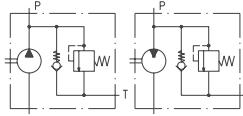

- PRV** Proportional relief valve and anti-cavitation valve.

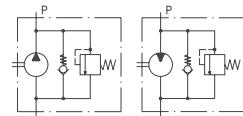

- (♦) For more information please consult our built-in valves technical catalogue and our pre-sales department

### MAX PRESSURE RELIEF VALVE

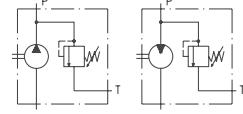

- VPEF..** Fixed setting with external drain.

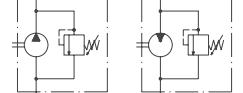

- VPIF..** Fixed setting with internal drain.

- VPER..** Adjustable setting with external drain.

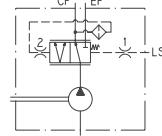

- VPIR..** Adjustable setting with internal drain.

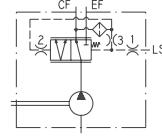

### LOAD SENSING VALVE

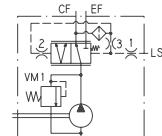

- ... Static.

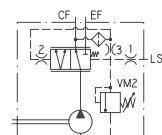

- ... Dynamic.

- ... Dynamic with relief valve fitted on the main line.

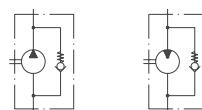

- ... Dynamic with relief valve fitted on controlled line.

### CHECK VALVE

- V8** Anti-cavitation valve.
